- H. The predator must ..... their prey before they eat them.
- I. Every Food Web begins with .....
- J. An ..... eats both plants and meat for energy.

### Name an Apex Predator from each environment:

<b>Land</b>	<b>Sea</b>	<b>Sky</b>

## Predators and Prey

There are different types of carnivores but not all of them are predators. Can you match the carnivore type to the correct animal?

**Ambush Predator** – Will either hide or attract their prey near then pounce on them.

Sand Tiger Shark

**Scavenger** – Will eat the meat of another animal but do not kill it. They take the leftovers from the predators.

Piranha

**Group Hunter** – Will work together to trap prey and share the food between the group.

Alligator Snapping Turtle

**Apex Predator** – Will hunt without the fear of being hunted themselves as they are top of the food chain.

Sea Bream

**Predator and Prey** – will prey on some animals but need to be cautious as they have predators who will hunt them as they are in the middle of the food chain

Crab

## Predators and Prey

Draw any animal in the below box.

Does this Animal have any predators? If Yes can you name them?.

.....

How does this animal hunt their prey? Which animals do they hunt?

.....
